SpecLink

Expect more from your specification software. Access best-in-class commercial Canadian content via the cloud.

The days of being restricted to word processing files are truly over. *SpecLink Cloud* allows you to harness the power of the most innovative master guide specification-writing platform on the market.

> **"SpecLink's content and the way it is organized improves the quality of specifications. Their approach to describing products and associated properties will be an eye opener to the specification community."**
>
> **Keith Robinson, FCSC, FCSI, RSW, LEED AP**
> **Head of Research and Development, Specifications, DIALOG**

Designed to help you work more efficiently

SpecLink was created by people like you: architects, engineers and specification writers determined to improve the specification process – and move the industry forward. We know about the challenges you face daily, because we've been there.

***SpecLink Cloud* will allow you to:**

- Import and customize your Office Masters
- Improve coordination by linking specs and Revit models
- Work faster with editing by selection versus deletion
- Minimize errors and omissions with intelligent links
- Keep content current with automatic updates
- Easily create data-driven submittal reports

SpecLink Cloud:
Write more accurate specs in less time

The database difference

Unlike word processing systems, *SpecLink* is built upon an intelligent SQL database that contains thousands of documents, sources and links. Deductive reasoning behind our intelligent linking pre-edits sections for a seamless user experience.

Outline, Short Form or Full Spec modes: See your project in the view of your choice in one click and save time and coordination efforts.

SpecLink content

Our best-in-class content has been harmonized with the Canadian Construction Documents Committee (CDDC) documents, construction industry standards, terms and Construction Specifications Canada's (CSC) best specifying practices, including consistent imperative mood language throughout.

Flexible and broadly applicable content is updated daily by our internal team of expert specification-writing design professionals, including continuous reference standards updates.

Improve your workflow with:

- Direct access to information within the platform to aid decision making
- Optimized section organization to reduce coordination time
- Content customization: Build your customizations on top of our content or create custom content and add to our data based reference standards and section IDs, including custom deductive reasoning
- Access to specifying requirements serving a variety of sustainable certification programs, such as Green Globes or LEED V4

Cloud collaboration

Comment on projects and easily coordinate models, drawings and specifications from a common data environment.

BIM integration

Simplify coordination between specification writers and designers working in Revit. Seamlessly connect specs and models within *SpecLink Cloud* so you can visualize and adapt to changes.

3D virtual walk-throughs

View embedded BIM objects, and isolate individual objects or layers within the model. Access your model from anywhere – without the cost of additional Revit licenses.
