

BSD SpecLink

Collaborate with all
your project teams via
a single platform during
every stage of a project.

Arm your internal designers, outside consultants and facilities management team with up-to-date building information from a consolidated source for consistent, efficient project planning.

SpecLink Cloud helps you:

- Save time.
- Reduce costs.
- Enforce design standards.
- Minimize change orders.
- Achieve total visibility.

“Capturing our corporate construction knowledge into our master spec becomes a valuable communication tool for our outside specification consultants.”

Michael McLane AIA, CSI
Principal
Taylor Design

SpecLink Cloud is the ultimate collaboration tool for your project team:

Stop working in a silo

SpecLink Cloud makes it easy to integrate data from diverse software platforms, including Revit. Your entire team can continue to use the tools and software they're accustomed to – all project data is synced and integrated in a single platform from which owners can monitor the project from start to finish.

SQL database vs. word processing

How much are you investing on the endless task of reviewing and editing static word processing documents? There's an easier, more efficient way to work. Unlike word processing systems, *SpecLink* is built upon an intelligent SQL database that contains thousands of documents, sources and links.

SpecLink's intelligent database helps you edit significantly faster, minimize errors and omissions, and dramatically improve your efficiency and accuracy. Deductive reasoning behind our intelligent linking pre-edits sections for a seamless user experience.

SpecLink Cloud gives building owners:

Transparency

SpecLink Cloud simplifies collaboration and gives owners complete transparency, whether you're working with design professionals on a design-to-build project, or arming your facilities team with up-to-date building information.

Control

Communicate and enforce consistency and quality standards efficiently via the cloud.

Archive corporate knowledge and best practices in a central database repository to share with your team.

Easily monitor your investment and enforce design standards throughout every stage of a project.

Visibility

Want to see what's behind that wall without tearing it down? Save money on facilities management? Easily generate QTOs, and access building data in your model – anytime, anywhere? *SpecLink Cloud* connects specs with Revit models for seamless BIM integration.
